

Pablo Miceli

Senior Full-Stack Engineer

Cape Town, South Africa · d1urno@gmx.com · pablomiceli.dev
github.com/d1urno · linkedin.com/in/pmicel

Building modern and scalable user experiences, with 15+ years in software development across finance, travel, energy and AI-powered applications, from prototyping through continuous production releases. I have led frontend and full-stack development, shaped application architectures and mentored developers, working closely with founders or product teams. My preferred stack is Vue / Nuxt, TypeScript and Tailwind CSS, backed by oRPC / tRPC APIs, Drizzle and PostgreSQL. I focus on clear interfaces, maintainable systems and thoughtful user experiences.

Recent experiences

Senior Full-Stack Developer - Switch Energy

Oct 2025 - Present

Contributed to building and shipping an energy trading application and maintaining production meter data management (MDMS) dashboards.

- Prototyped and developed energy trading features, including diagnostic metrics and energy allocation forecasting
- Maintained MDMS dashboards across the full stack
- Worked directly with new clients to provide technical support and gather product feedback

Stack: React, Material UI, TypeScript, Recharts, NestJS, MongoDB, Turborepo and AWS

Senior Full-Stack Developer - Defijn

Sep 2024 - Aug 2025

Worked across multiple client projects in a fully remote agency, collaborating with teammates on implementation and code quality.

- Built interfaces with React, Tailwind CSS, TanStack, shadcn/ui and d3.js.
- Worked with Firebase, Docker, Cloudflare Workers and Durable Objects, and AI integrations using Llama, Gemini and Stable Diffusion inpainting models.

Senior Frontend Lead - TROOP

Dec 2021 - Feb 2024

Led frontend development and application architecture for a fully remote travel startup.

- Built the application with Vue 3 Composition API, TypeScript, Apollo GraphQL and Mapbox in a pnpm monorepo.
- Mentored developers and established code principles and conventions.
- Collaborated with product and design teams on user experience and implementation.

Stack: Vue 3, TypeScript, GraphQL, Mapbox, Tailwind CSS, Vite.

Senior Full-Stack Engineer - Airbank

Feb 2021 - Aug 2021

Led full-stack development and architecture for a fully remote German finance startup.

- Architected a modular Apollo Server backend with TypeScript and Open Banking API integrations.
- Worked on a migration from FaunaDB to PostgreSQL with Prisma.
- Built the frontend with Vue 3, Apollo Client, TypeScript and Tailwind CSS.

Stack: Vue 3, TypeScript, Node.js, GraphQL, PostgreSQL, Prisma, Vite.

Full-Stack Lead Developer - Matera Fintech

2020

Led full-stack development of an institutional website for a fintech company in a remote project.

- Connected headless Drupal and a GraphQL API to a statically generated Nuxt frontend.
- Implemented internationalization with i18n and styling with Tailwind CSS.
- Built an open-source **Nuxt image extraction module** for the static-generation workflow.

Project Lead Developer - Paraná Banco

2019

Led the bank's institutional website project, working remotely with a brief onsite period in Curitiba, Brazil.

- Focused on headless Drupal, GraphQL endpoints and CI/CD alongside the bank's development team.
- Coordinated with the frontend team using React and Apollo Client, with limited direct frontend contributions.

Senior Lead Developer - CTRL.365

Jan 2019 - Feb 2020

Worked onsite at an agency in São Paulo, Brazil, delivering web projects alongside the design team.

- Built responsive landing pages for brands including Acer, Consul and Nestlé.
- Developed an intranet with authentication and push notifications, plus APIs and database administration panels.
- Interviewed candidates and contributed to team management.

Technical focus

Frontend: Vue / Nuxt · TypeScript · Tailwind CSS · React · Material UI · Recharts · TanStack

Backend and data: Node.js · oRPC / tRPC · Express · Hono · NestJS · GraphQL / Apollo · Drizzle · Prisma · PostgreSQL · SQLite · MongoDB

Tooling and integrations: Vite · pnpm / Turborepo · AWS · Cloudflare · Docker · Firebase · CI/CD · AI integrations

Selected work

Trace CDR: An interactive carbon emission data visualization app using React, TypeScript, Tailwind CSS, d3.js and TanStack Query. www.tracecdr.org · Demo: preview.tracecdr-demo.pages.dev

Nuxt image extractor: Historical open-source Nuxt module for downloading CMS images into generated static sites. github.com/d1urno/nuxt-image-extractor
